

## The RJ-TL Series of Top Loading Spray Washers

### Features

- Available as a single, two or three stage machine
- Stainless Steel Construction
- Coarse Filtration & Digital Timers
- Low water level detection

### Cleaning Agents

- Detergent and water
- Alternative “green” solvents
- Caustic Solutions
- Flammable solvents

## Top Loading Spray Washer - RJ-TL Series

Typically used for lighter components, our top loading spray washers are used worldwide for fast and reliable degreasing.

Each of the six sizes available in the RJ-TL series is available as a single stage (wash) or two stage (wash & rinse) system. To increase the longevity of the system all products within this range are manufactured from stainless steel parts.

To ensure the safety of the operator interlocks remain engaged throughout the cleaning process until the wash chamber has returned to a safe temperature.

To make certain your top-loading spray washer is in service for years to come many control measures are fitted as standard. Along with coarse filtration, digital temperature controls and a digital cycle timer, your machine is protected from detrimental impacts caused by low water input levels.
